## Pros and Cons:

#1.

Pros: It's clean, the colours go well with each other.  
font: its clean and easy to read on screen.

Cons: I wouldn't want to use too much of that colour on the site because it might look a bit weird. The colours feel like it could be too much of a distraction.

#2.

pros:

- the colours are more of a tea colour, but it might not work too well on a white background.
- the site can still look simple and clean, not too much noise or distractions

cons: there might be a bit too much green. and not enough other colour.

#3

pros: a variety of colour. there are some complimentary colour used, dont feel like its too much of a distractions if used right.

cons:
